Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Date	Team ID	Project Name	Maximum Marks
11 october 2026		Car Rental Request Automation in ServiceNow	4 Marks

Functional Requirements

Following are the functional requirements of the proposed Car Rental Request Automation solution built on ServiceNow Service Catalog and Flow Designer.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Car Rental Request Submission	Create Service Catalog Item “Car Rental Request” Form variables: Requested Date, Pickup Location, Drop Location, Duration, Car Type, Reason / Justification Order Now / Submit generating REQ & RITM
FR-2	Approval Workflow	Manager Approval (Primary) based on requester’s manager Conditional secondary approval (long duration / premium car) Approval / Rejection decision captured with comments
FR-3	Task Assignment & Fulfillment	Automatic SCTASK for Transport / Fleet team after approval Assignment Group routing and work-note updates Car assignment / availability check Task closure updates request state to Closed Complete
FR-4	Notifications & Communication	Notification on request submission Notification to manager for pending approval Notification to requester on approval / rejection Notification to Transport team on new task Closure notification with summary
FR-5	Status Tracking & Visibility	Real-time request status on RITM / REQ Service Portal / My Requests view for end users Activity stream / work notes for audit trail
FR-6	SLA & Reporting	SLA definition for approval and fulfillment stages Dashboard / reports for open requests, cycle time, SLA breaches Update Set based configuration for transportability

Non-functional Requirements

Following are the non-functional requirements of the proposed solution.

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	Intuitive Service Catalog form with clear labels, help text and mandatory indicators. Minimal clicks to submit and track status via Service Portal / My Requests. Consistent look-and-feel with existing ServiceNow instance branding.
NFR-2	Security	Role-based access: only authenticated employees can request; managers approve only their reports. ACL on catalog item, RITM, SCTASK and any custom inventory table. Audit logging of all approvals, task updates and state changes. Secure handling of personal data per organizational policy.
NFR-3	Reliability	Flow Designer error handling and retry for notification failures. Business Rules and Flow conditions prevent progression without required approvals. Data integrity checks on mandatory variables before task creation.
NFR-4	Performance	Catalog form loads in < 3 seconds under normal load. Flow execution completes approval routing and task creation within seconds. Efficient GlideRecord queries; avoid heavy client scripts on form load.
NFR-5	Availability	Solution available as long as the ServiceNow instance is available (platform SLA). No single point of failure introduced by custom configuration; Update Set deployable across instances.

NFR-6	Scalability	Supports high volume of concurrent requests via ServiceNow platform architecture. Flow Designer and Business Rules scale with instance capacity. Easy to extend for additional car types, locations or multi-level approvals without redesign.

Note: All configurations (Catalog Item, Variables, Flow, Business Rules, Notifications) will be captured in an Update Set for controlled promotion from development to test / production instances.
